                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gene structure and chromosomal localization of the mouse homologue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            of rat OX40 protein.";

Eur. J. Immunol. 25:926-930(1995).

- FUNCTION: RECEPTOR FOR THE OX40L/GP34 CYTOKINE.

-! SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-! SIMILARITY: CONTAINS A LA-NGFR/TWFR-TYPE CYSTEINE-RICH REGION.
                                                                                                                                                                                                                                                                       Mus musculus (Mouse).

                                                                                                              The sequence was deduced from a DNA sequence obtd. from a clone isolated from a library prepd. from a human fibroblast cell line, WI-2C WA4 (ATCC CCL 95.1). The clone is deposited as Accession No. 68088 under the name pCaV/NOT-TNF-R. The DNA can be truncatd to produce sequences which express soluble receptor comprising residues 1-255, 1-185 or 1-163 of the protein.

The linker may comprise 5-100 amino acids selected from Gly, Asp, Ser, Thr and Ala. These linkers separate the individual moeities by such a distance that each component of the fusion potation is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, diagnosis and assays for conditions mediated by TNF or IL-1, particularly in conditions in which both TNF and IL-1 play a causitive role. They may be used to treat cachexia, rheumatoid arthritis, diabetes, multiple sclerosis, pulmonary fibrosis and silicosis, oerebral malaria, allograft and xenograft rejection in graft verses host disease, sepsis, septic shock, inflammation, allergies and autoimmune dysfunctions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequences given in AAR42058-59 repressent human tumour necrosis factor receptor (TNF-R) and the sequences in AAR42060-61 represent human interleukin-1 receptor (IL-1R). These sequences were used in the production of a fusion protein which conformed to one of the formulae:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New fusion protein tumour necrosis factor and human interleukin-1 receptor - useful in therapy, diagnosis and assays of e.g. rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc.
pulmonary fibrosis; silicosis; allograft; xenograft; rejection; graft verses host disease; sepsis; inflammation; allergy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 2468; DB 14; Length 461; Pred. No. 1e-152;
                                                                                                                                                                                                                                                                                                                                            "Preferred soluble TNF-R"

The present sequence encodes human tumour necrosis factor family receptor (TNP-RII) polypeptide. The specification describes a TNF receptor designated TRI. An agonist to the TRI receptor is useful for inhibiting tumour growth, to stimulate human callular proliferation, to regulate immune response and antiviral response, to protect against the effects of ionising radiations, to protect against chlamydia infections, to regulate growth, and to treat immunodeficiencies such as in human immunodeficiency yiuus (HIV). An antagonist to the TRI receptor is useful for treating T-cell mediated autoimmune diseases, acquired immunodeficiency syndrome (AIDS), septic shock, cerebral malaria, graft rejection, cytotoxicity, cachexia, apopticsis, and inflammation. TRI polynucleotides and polypeptides, and TRI agonists and antagonists are useful for treating cancers, cardiovascular diseases, inflammatory diseases, atherosclerosis, diabetes mellitus, neurological disorders, autoimmune diseases, for promoting angligenesis, for treating allergy, for wound healing, for regulating bone formation and for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 QHAKVFCTKTSDTVCDSCEDSTYTQLWNWVPECLSCGSRCSSDQVETQACTREQNRICTC 120

The clone from which the sequence was deduced was isolated from a cDNA library prepd. from RNA form U937 cells treated with PMA/PHA. The whole gene can be inserted into expression vectors for prepn. of TNF inhibitor for use in the treatment of inflammatory and degenerative diseases.

The present sequence is given in a specification relating to novel compositions and methods containing tetracycline or tetracycline-like compositions and methods containing tetracycline or tetracycline-like diseases. Such diseases include acute inflammatory conditions associated with viral hemorrhagic diseases (including diseases caused by Bunyaviridea, Filoviridae, Flaviviridae or Arenaviridae viruses), parasitic diseases, bacterial infections, sepsis, cachexia, autolmmune disorders, acute cardiovascular events, chronic myelogenous leukaemia and transplanted bone marrow-induced graft-versus-host disease, septic shock, immune complex-induced colitis, cerebrospinal fluid inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                multiple sclerosis, inflammatory responses associated with trauma, systemic inflammatory response syndrome (SIRS), adult respiratory distress syndrome (ARDS), acute liver failure, inflammatory bowel disease

The polypeptide is also useful for modulating apoptosis and useful in treatment of conditions associated with abnormal physiology or development, such as cancer or degenerative conditions and for regulation of viral infection and replication. At least five different death receptors are known, which include the CD95 (Fas/APO-1), the TNF receptor. TNF receptor apoptosis-mediated protein (TRAMP), death receptor-6 (DR-6), and TNF-related apoptosis-inducing ligand (TRAIL) receptors 1, 2 and 4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Purified or recombinant polypeptide for modulating apoptosis comprises a sequence which binds to an antibody specific for UL144 or its

                 The present invention provides the protein and coding sequences of the human tumour necrosis factor receptors TR13 and TR14. These sequences are useful in the diagnosis and treatment of many diseases, including cancer, autoimmune diseases, cardiovascular disorders, allergies, neurodegenerative diseases, graft rejection, inflammation, aneurysms and

The present invention describes the human TRID protein (tumour necrosis factor (TNF) related apoptosis inducing ligand (TRAIL) receptor without intracellular domain, also referred to as tumour necrosis factor receptor 5 (TNFR-5 or TR5)). TRID has cytostatic, immunosuppressive, nootropic, neuroprotective, antiviral, antilnflammatory, anticonvulsant, antiparssitic, cardiant, anti-HIV, antiparkinsonian and vasotropic activities, and can be used in gene therapy. The TRID polynucleotides are useful for detecting complementary polynucleotides. TRID proteins and parasite, bacteria and viruses, restenosis and graft versus host disease. They are also useful for inducing proliferation of T-cells, endothelial cells and certain heematopoietic cells, to regulate antiviral responses and to prevent certain autoimmune diseases after stimulation of TRID by an agonist or TRAIL binding facilitator. The antibodies which bind TRID colynucleotides, proteins, antibodies, agonists and antigonists are useful for treating and/or preventing diseases associated with increased or decreased apoptotic cell death. The TRID colynucleotides, proteins, antibodies, agonists and antigonists are useful in the diagnosis, treatinent or prevention of: (a) cancer; (b) autoimmune disorders; (c) diseases associated with increased cor decreases associated with increased cor decreased cor

The novel TNF inhibitors of the present invention are useful as therapeutic agents for inhibiting the activity of TNF and interleukin (IL-1), and for treating inflammatory and degenerative diseases mediated by TNF. The present sequence is the precursor for 40 kbg TNF inhibitor. The 40 kbg TNF inhibitor can inhibit both TNF alpha and beta (lymphotoxin).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel 30 kDa tumor necrosis factor inhibitor analog comprising a non-native cysteine residue cross-linked with polyethylene glycol, useful for treating inflammatory and degenerative diseases mediated by

AAQ45224 is cDNA from clone 1 of library W1-26 VA4 of human fibroblast cell line W1-26 VA4. The mature full-length TWRRI is a glycoprotein having a mol. Wt. of about 75-80 kba.The cloning of the cDNA for TNFRI was described in Smith et al., Science 248:1019,1990. Clone 1 is contained in expression vector pcAv/NOT-TNFR (ATCC 68088). The preferred TNFRs of the present invention are soluble forms of TNFRI and TNFRI having at least 20 AAS. Soluble TNFR constructs are devoid of a transmembrane region but retain the ability to bind TNF. Examples of soluble TNFRs are huTNFRIdelta185 and huTNFRIdelta183 which encode respectively AAS 1-235,1-185 and 1-163 of AAR51002. An equivalent soluble TNFR is huTNFRIGHLAIS wherein x is selected from any one of AAS 163-235 of AAR51002.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Partial amino acid sequences were determined for the 55 and 75kD TNF-PBS (see AARIJO72-R11081) and oilgonucleotide primers were synthesised based on these partial sequences. The primers were to produce a cDNA fragment for use as aprobe to screen a human placental cDNA bank constructed in lambda 9t11. Postitive clones were identified and sequenced. Repeated sequencing showed a discrepancy at position 7 such that the third codon encodes either Thr or Ser.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Insoluble tumour necrosis factor binding proteins - and DNA encoding them, useful in pharmaceutical prods. and for antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ı,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel homogeneous insoluble proteins (I), their (in)soluble fragments (Ia) and their salts that can bind tumour mecrosis factor (TNF). The products of the invention have anti-inflammatory and antimalarial activity. (I) and (Ia) are used (i) to treat diseases in which TNF is involved (e.g. septic shock, autoimmune glomerulonephritis, cerebral malaria, immune responses and inflammation), (ii) to purify TNF, (iii) to identify TNF (ant)sgonists and (iv) for diagnostic determination of TNF in body fluids. Antibodies raised against (I) are used for affinity purification of (I). This sequence represents a tumour necrosis factor binding protein fragment described in the method

Example 13; Fig 10; 72pp; English.

XX
CC
The present sequence is a fusion protein of tumour necrosis factor
receptor (TNRR) and the constant region of an immunoglobulin molecule
(FC), denoted sTNFR(075):Fc. A recombinant adeno-associated virus (TAAV)
CC vector encoding the present sequence was used to infect a rat model of
arthritis. The rats showed a significant reduction in arthritis symptoms
CC arthritis. The rats showed a significant reduction in arthritis symptoms
CC arthritis invention providing a new recombinant viral vector. The
vector comprises a single-stranded heterologous nucleotide sequence
CC having a region that forms intrastrand base pairs so that the expression
CC of a coding region of the heterologous sequence is enhanced. The
cc creening. The vectors is useful in gene therapy and genomics
CC and expression of a sequence of interest in a host cell and in the
CC and expression of a sequence of interest in a host cell and in the
CC and expression of the gene product of interest is reduced for
CC ather than weeks since the vectors can efficiently and rapidly form
CC duplex templates for transcription.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 13, Sequence 4, A Sequence 5, A
